RELATIONSHIP		9. L. RING		10. L. LITTLE		RIGHT FOUR FINGERS TAKEN SIMULTANEOUSLY *	
RELATIONSHIP		LEFT FOUR FINGERS TAKEN SIMULTANEOUSLY *		L. THUMB		R. THUMB	

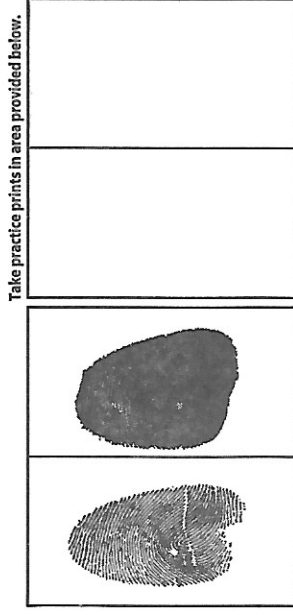

How to take prints

- Do not open foil pouch until ready to fingerprint.**
- Open the foil pouch. It contains a strip coated with a clear inkless fingerprint activation solution.
 - Take out the strip. Place the strip on pouch, on the designated area.
 - Place I.D. Card and pouch with strip on a flat surface.
 - Lightly and quickly touch** your (child's) finger on the strip coated with the activation solution.
 - Lightly and quickly touch** the coated finger in the appropriate box on the I.D. Card.
 - Throw away the foil pouch and strip once you are finished.

Do not roll finger.

- Although no black residue is left on the finger, wash your (child's) hands or wipe with damp cloth.
- Fingers must be printed in sequential order. (Please note any amputations or partial amputations in the correct finger block.)
- When completed, fingerprints should be clear and unsmudged. If uncertain, place a second print next to the first.

NOTE: Fingerprints are initially light and will continue to grow darker.

Take practice prints in area provided below.

GOOD

(Smudged; pressed too hard)

PRACTICE PRINTS

(Touch lightly and quickly)

DNA Section

Technology has now advanced to the point that saliva is all that is needed for authorities to gather a DNA sample of your child.

Taking your child's DNA is as easy as 1, 2, 3.

- Insert the corner of the card into child's mouth.
- Close mouth on card.
- Suck on card for 1 second. This will embed your child's saliva/DNA into the card.

Close lips along outline

_____/_____
DNA Sample Date

If ever needed, authorities may cut out this section of the I.D. kit to retrieve your child's DNA.

NOTE: DNA is present if corner is moist.

* Four fingers taken simultaneously: coat each finger separately, then lightly press all four fingers at the same time.

For Your Children Ages 4-18
